Translation Installation Guide

pdf Note: We would recommend downloading and installing the latest YAB patch before continuing.

1. Locate the language that you need from the "Translation Packages Available" section below and find out which Enterprise Edition, Enterprise Financials, or AUX packages are available.

2. Download the desired language packages from the server.

3. Edit configuration.properties.
Add your language code to the end of the languages list. The language code information can be found in the “Language Code Table” below. For example,

languages=us,ge,sk,si
Note: The language code “us” always must be on the languages list.

4. Install the Enterprise Edition language package.
Example: yab install qad-lang-cr-2022.0.5.0 -install-update:false

5. Install the Financials package.
Note: This step is only required if your Financials version is lower than the required package in the language table.
Example: yab install enterprise-financials-app-2020.0.20.1.zip -install-update:false

6. Run a yab update. yab update

7. Run the Financials Synchronize. yab fin-sync-run -topic:Full

8.Restart the environment. yab restart
