Overview

Current QAD FTZ Version: v2026.09.22

Release Date: September 22, 2026

These release notes include information about the latest QAD FTZ features, enhancements, and fixes. These changes may affect the way that you implement and use QAD FTZ. Review this document before proceeding with any changes to your installation.

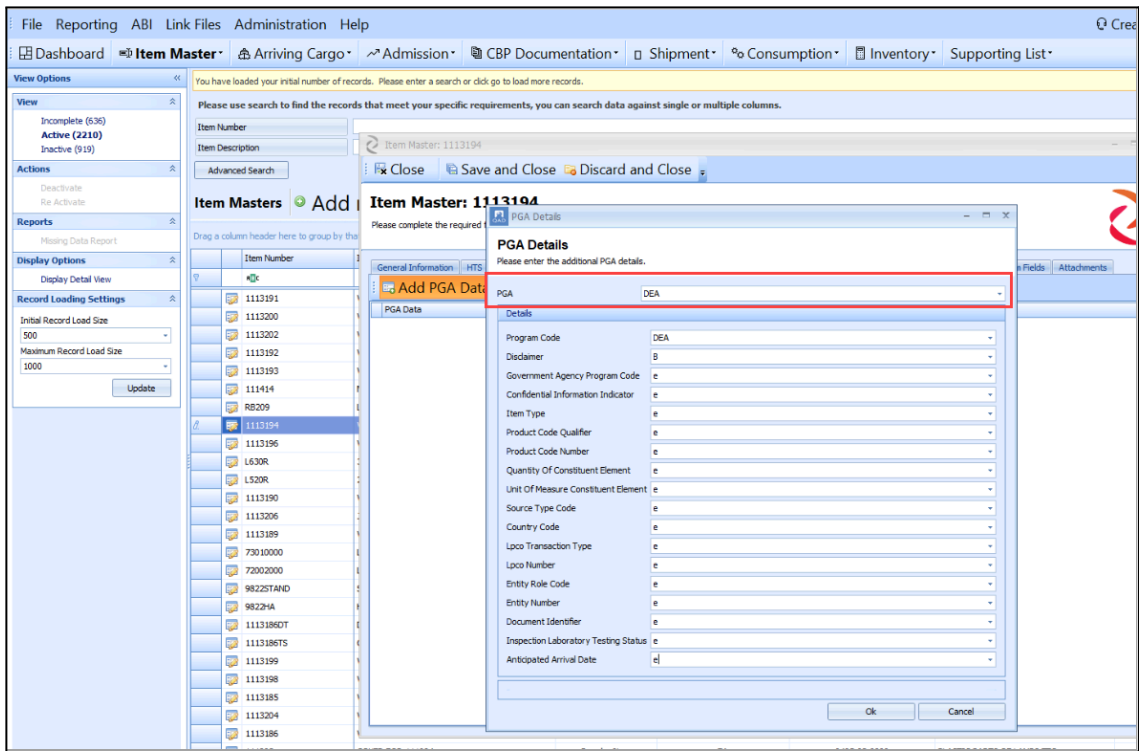

New Features and Enhancements

This section summarizes the new features and enhancements delivered in this release.

Item Master Processing

DEA PGA Data Support

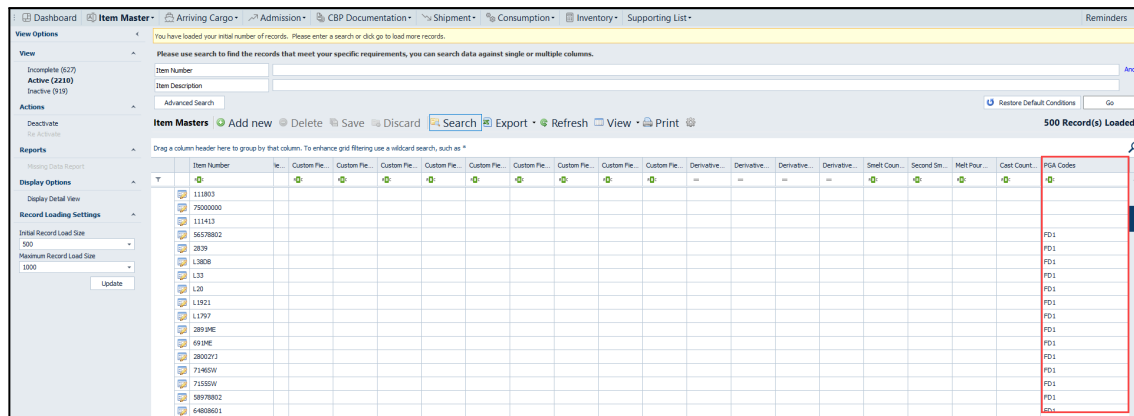

You can now select the DEA (Drug Enforcement Administration) option when adding PGA details for an Item Master record. When you select DEA from the Program Code dropdown, the related fields are displayed.

New column in the Item Master grid

A new column, PGA Codes, has been added to the Item Master grid. The value in this column is pulled from the Item Master > Partner Government Agency tab for a particular

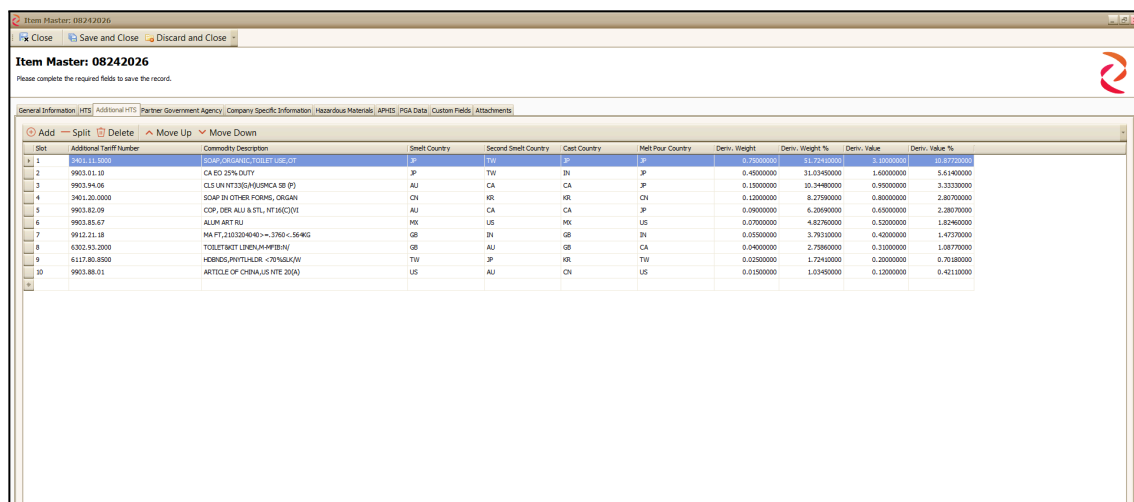

item, ensuring accurate data is displayed in the grid.

Additional HTS Configuration

You can now configure each HTS entry in the Additional HTS tab for an Item Master record. Previously, the fields Country of Smelt, Country of Second Smelt, Country of Cast, Country of Melt and Pour, Derivative Weight, and Derivative Value were shared across all additional HTS entries and could not be configured individually.

Each additional HTS entry now has its own set of these fields, allowing you to assign separate 232 derivative tariff numbers and other section-related values per HTS entry.

Admissions Processing

PGA Data Support

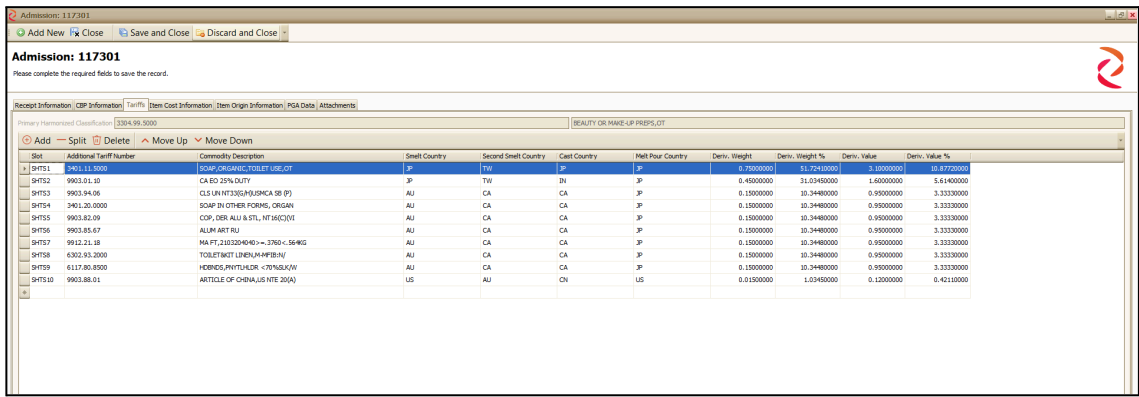

When you create an Admission record from Item Master, the PGA data from the Item Master is automatically carried over to the Admission record, saving you the effort of re-entering the same information. You can still update the values manually if needed.

Note: If PGA data is manually updated in the Admissions screen, those values override the ones inherited from Item Master.

Additional HTS Configuration

You can now configure each HTS entry in the Tariffs tab for an Admission record. Previously, the fields Country of Smelt, Country of Second Smelt, Country of Cast, Country of Melt and Pour, Derivative Weight, and Derivative Value were shared across all additional HTS entries and could not be configured individually.

Each additional HTS entry now has its own set of these fields, allowing you to assign separate 232 derivative tariff numbers and other section-related values per HTS entry.

Lot Behavior

On each admission line, the inventory now correctly updates and increments quantities against the specific lot. This ensures that when goods are received, the stock levels are accurately reflected per lot.

E214 Processing Instructions and Remarks

In the Arriving Cargo Information screen, when you enter a comment in the **Block 46 Comments** field on the Bill of Lading > Master Conveyance tab, the comment is now automatically copied to the **E214 Instructions and Remarks** field in the Admission > E214 Processing Screen for the following actions:

- Indication of the physical arrival of goods
- Concur

You can edit these comments.

Link File Processing

PGA Data Support

PGA data can now be uploaded using a link file, in addition to manual entry through SmartZone. This makes it easier to manage and update PGA information in bulk without navigating through the system manually.

Shipment Processing

Lot Behavior

On each shipment line, the inventory now accurately decrements quantities from the specific lot. This ensures that when goods are shipped out, the correct lot quantities are reduced, keeping inventory records precise and up to date.

Administration

Data Tools

In the Bulk Update - Admission Data View window, the SHTS1–SHTS10 dropdowns now display both active and expired HTS codes for admissions. Additionally, each entry now displays the HTS Code, Begin Date, and End Date.

This enhancement enables administrators to select expired codes and also clearly distinguish between duplicate codes by their date range.

Company Information

A new field, **Applicant for Admission EIN**, is now available in Admission under Company Options > Company Information. The value you enter in this field populates and displays in the E214 Message Details window.

The screenshot shows the 'Company Options' window with the 'Company Information' tab selected. The 'Applicant for Admission EIN' field is highlighted with a red box and contains the value '12-3456789'. Other fields include 'Next Auto Incremented CBP Admission Number', 'Next Auto Incremented Shipment Number', 'Standard Export Overhead Percentage', 'CBP Assigned In Bond Number Begin Range', 'In Bond Number End Range', 'Manufacturing Authorization', and 'CBP 216 Expiration Date'.

The screenshot shows the 'E214 Message Details' window with the 'Sent Message' tab selected. The message content is displayed, including the 'Applicant for Admission EIN' value '12-3456789' which is highlighted with a red box. The message content includes various fields and values such as 'A1901SU7FTZ123091626', 'FT', 'PH89B3U8EC1', 'B 2722GV2FT', '10A 2620260904N4110N', '01-2828728 J914', '20D 2026090420260904 20260904 J914', '40J914ADJ260904001', '50000013304995000 JP0000000011000KG 000000000000 0', '51000000000100000000031350000000001P00000000', '60BEAUTY OR MAKE-UP PREPS,OT MID115BEG', 'Y 2722GV2FT', and 'Z1901SU7 091626'.

Note:

- You need to fill out the **Applicant for Admission EIN** field only if the Applicant for Admission is a different entity than the FTZ Zone Operator (meaning they have different Importer of Record IDs).
- If the Applicant and the Zone Operator are the same, you can leave this field blank.

Resolved Issues

This section summarizes the issues addressed in this release. These fixes enhance system stability, improve user experience, and resolve specific problems reported by users or identified internally.

Arriving Cargo Information Processing

The following issues have been resolved in this release:

- Resolved an issue where users were unable to set a preferred filter as a default view for the Arriving Cargo Information screen. Users can now save a preferred filter as the default view, which persists when returning to the screen. Options to save, load, or delete the default filter are also available.

Admissions Processing

The following issues have been resolved in this release:

- Resolved an issue where exporting data from the Admission screen to XLS or XLSX format caused the screen to freeze and no data was exported. This issue was observed when exporting large volumes of data. The export now completes successfully for large datasets.

CBP Documentation Processing

The following issues have been resolved in this release:

- In the CBP Entry for In Bond/Export window, on the In-Bond Related Information tab, the following validation message appeared when the State field was left blank for non-US countries: *"State is required for QP Processing."*
As the State field is only required for US-based addresses, the message now only shows when the Country is set to US.

Inventory Processing

The following issues have been resolved in this release:

- When multiple lots existed for the same item, only the first lot was being saved. All lots are now processed and saved independently, ensuring that inventory balances are accurately calculated and reflected in the Inventory Comparison report.

Link File Processing

The following issues have been resolved in this release:

- Resolved an issue where a shipment processed through a link file was incorrectly moved to Pending Documentation status when only the shipment date was added, despite the shipment still missing a required item.

A shipment should remain in Incomplete status until both a valid shipment date and at least one item are present. The shipment now correctly stays in Incomplete status until all required information is provided, and only moves to Pending Documentation once both the date and item are added.
