Database Definitions Change Summary

Product Name Change

Starting in September 2019, the new name for QAD's complete portfolio of products is QAD Adaptive Applications. Additionally, QAD Adaptive ERP is the new name for QAD's flagship ERP solution. QAD Adaptive ERP includes the functionality previously associated with QAD Cloud ERP and QAD Enterprise Applications - Enterprise Edition, plus the QAD Enterprise Platform and Adaptive UX which resulted from the Channel Islands program. Going forward, the terms QAD Enterprise Applications, QAD Cloud ERP, and Channel Islands will be deprecated but will remain in previous documentation and training materials. QAD's intention is to—as soon as possible—eliminate the use of the deprecated terms going forward.

Symbols and Conventions 3

Introduction

This book is intended for system administrators and programmers doing software conversions and custom programming.

How This Book Is Organized

See “Symbols and Conventions” for symbols.

Database tables are grouped by module and listed alphabetically, with the following information.

ad_mstr Address Master				
Field Name	Label	Col-Label	Format	Dec
ad_addr	Address		x(8)	
ad_address_id	Business Relation Address		9999999999	
ad_alt_um	Alternate UM	UM	x(2)	

- *Field Name*. The name of the field.
- *Label*. The field label as it appears on screens.
- *Col-Label*. The column label that appears on reports.
- *Format*. How, and what kind of, data can be displayed.
- *Dec*. The maximum number of decimal places that can be stored.

Some fields in the database are not currently used. These fields are either:

- User definable for custom programming
- Reserved for future use by QAD
- Obsolete (only used in earlier versions)

Each database table has at least one index. By default, Progress sorts and retrieves records using the primary index, which is indicated by an asterisk (*). Indexes have the following attributes.

Index-Name	Uni	Field-Name	Asc	Abbr
* ad_addr	yes	ad_domain	yes	no
		ad_addr	yes	no
ad_address_id	no	ad_address_id	yes	no
ad_edt_tpid	no	ad_domain	yes	no
		ad_edt_tpid	yes	no

- *Primary Index*. Indicated with an asterisk. The most frequently used index. Each table has one and only one primary index. Progress uses the primary index when retrieving records or ordering records for a list (like a report) if you don't specify another index. The primary index reflects the most common order, or the most natural order, by which records are sorted.
- *Index Name*. The name of the index.
- *Uni (Unique)*. Yes indicates only one record in the table can have a particular index value.
- *Field Name*. Each index has one or more field components.
- *Asc (Asc)*. Yes indicates that records are ordered and accessed by ascending field values.
- *Abbr (Abbreviated)*. For character data fields, a sort option that examines partial records. Tables with abbreviated indexes sort faster but require more disk space.

Symbols and Conventions

The following symbols are used in this book.

Symbol	Meaning
*	Primary Index
!	Shows where a column label wraps to next line

The following conventions are used in this book.

Convention for Designating Fields	Meaning
[x]	Extent of array field
<prefix>__user<number>	User field (ac__user1)
<prefix>__dec<number>	User decimal data field (ac__dec01)
<prefix>__chr<number>	User character field (ac__chr01)
<prefix>__qad<number>	QAD reserved field (ac__qad01)
<prefix>_x<number>	Obsolete field (ac_xctr)
